

BXB Digital offers visibility into the location and condition of your goods as they move across multiple carriers and multiple modes of transportation. Delivered as a service, our solutions combine IoT technologies and algorithms to help you optimize your supply chain operations for efficiency and quality.

What We Deliver

Integrating sensor data with supply chain context and information, BXB Digital's Goods Visibility and Quality solutions can help you:

- Understand where your goods are and where they spend time in the supply chain.
- Pinpoint problem areas and address causes for damage and delays
- Benchmark and compare goods movement metrics to improve efficiency and quality.

How it Works

Digitized Assets

Cutting edge digital devices are integrated with our shipping platforms and provide a variety of data acquisition capabilities.

Data-driven Solutions

Cloud-based business network applications provide insight into environmental conditions that can impact goods quality.

Integrated Operations

We deliver already digitized pallets and containers. No need for procuring, charging, or returning devices to avoid loss charges. You can focus on your core activities instead of auxiliary, time consuming and cost incurring tasks.

- **Temperature and Impact Monitoring**

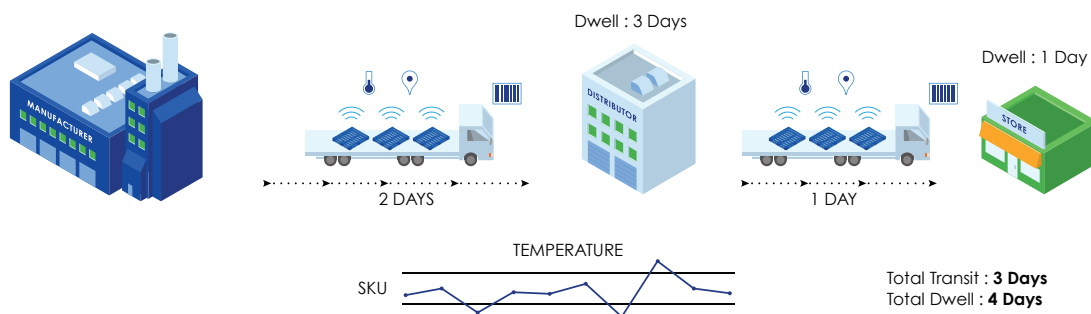

Temperature and impact tracking and incident alerts provide retailers and distributors seamless monitoring of shipments across a range of products such as perishable beverages, meat, and protein. The solution senses incidents which exceed defined thresholds, and continuously logs sensor readings.

- **Arrival Notifications**

Arrival Notifications give real time visibility of when and if goods arrive at manufacturer, co-packer, carrier, Retail DC, and Retail stores. Data can also be integrated with ERP and supply chain planning systems, providing the basis for predictive abilities and improved planning and decision making.

Move from “I think” to “I know”

BXB Digital's Goods Visibility and Quality solutions deliver near real-time insights for both inbound and outbound goods movements within your supply chain. For information on how to participate in our BETA Pilot Program, contact us at sales@bxbdigital.com.

Tracking and Condition Monitoring, with Product Association and SKU, Lane Performance
